### **Requirement:**

The behavior of specimens shall be classified HB (HB = horizontal burning) if,

1 There are no visible signs of combustion after the ignition source is removed, or

03/18/2019

2 The flame front does not pass the 25 mm reference mark, or

3 The flame front passes the 25 mm reference mark but does not reach the 100 mm reference mark, or

4 The flame front reaches the 100 mm reference mark and the linear burning rate does not exceed 40 mm/min for specimens having a thickness between 3 and 13 mm or 75 mm/min for specimens having a thickness less than 3 mm.

5. If only one specimen from the first set of specimens does not comply with the criteria indicated, another set of specimens is to be tested. All specimens from this second set shall comply with the criteria indicated in order for the material, of that thickness, to be classified as HB.

6. If the linear burning rate does not exceed 40 mm/min when tested in the 3.0  $\pm$ 0.2 mm thickness, the HB category designation shall be extended to a 1.5 mm minimum thickness.

#### Conclusion:

According to test results, the submitted sample meet the class HB specified in ASTM D 635:2014

**Statement:** The test results relate to the behaviour of the test specimens of a product under the particular conditions of the test; they are not intended to the sole criterion for assessing the potential smoke and toxicity hazard of the product in use.
